GROUP 2 ENGINE SPEED & STALL RPM

1. TEST CONDITION

1) Normal temperature of the whole system

- Coolant : Approx 80° C (176°F) - Hydraulic oil : $45 \pm 5^{\circ}$ C (113 \pm 10°F) - Transmission oil : $75 \pm 5^{\circ}$ C (167 \pm 10°F)

2) Normal operating pressure: See page 6-50.

2. SPECIFICATION

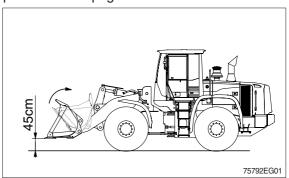

Engine speed, rpm					Remark
Low idle	High idle	Pump stall	Converter stall	Full stall	hemark
850±50	2300±50	2050±70	1960±70	1510±100	

3. ENGINE RPM CHECK

Remark: If the checked data is not normal, it indicates that the related system is not working properly. Therefore, it is required to check the related system pressure: See page 6-50

1) Pump stall rpm

- Start the engine and raise the bucket approx 45 cm (1.5 ft) as the figure.
- Press the accelerator pedal fully and operate the bucket control lever to the retract position fully.
- Check the engine rpm at the above condition.

2) Convertor stall rpm

- Start the engine and lower the bucket on the ground as the figure.
- Set the clutch cut off mode switch at the OFF position.
- Press the brake pedal and accelerator pedal fully.
- Shift the transmission lever to the 4th forward position.
- Check the engine rpm at the above condition.

3) Full stall rpm

- Start the engine and raise the bucket approx 45 cm (1.5 ft) as the figure.
- Set the clutch cut off mode switch at the OFF position.
- Press the brake pedal and accelerator pedal fully .
- Shift the transmission lever to the 4th forward position and operate the bucket lever to the retract position fully.
- Check the engine rpm at the above condition.
