GROUP 3 POWER TRAIN

Trouble	Probable cause	Remedy
Final drive noisy	No or low lubricating oil level	 Remove oil level check plug from the drive housing. If oil does not flow from it, oil level is low and some must be added.
	Axles too much endplay	 Preload axle bearings removing all endplay.
	Locking pin not inserted in wheel axles	 Inspect and adjust or replace damaged parts.
No drive on one side	• Drive chain failure	Inspect chain and connection link. Replace damaged parts.
Travel hydraulic system failure	Travel motor shaft or key failure	Inspect and replace damaged parts. Refer to travel hydraulic circuits.
