

## GROUP 7 ENGINE OVERHEAT PREVENTION SYSTEM

2609A5MS09

1. If the engine coolant temperature or the hydraulic oil temperature is overheated over 100°C, the warning lamp is ON and the pump input torque or the engine speed is reduced as below logic table.

### 2. LOGIC TABLE

| Description         |           | Condition  | Function  |
|---------------------|-----------|--|---|
| First step warning  | Activated | - Coolant temperature : Above 103°C<br>- Hydraulic oil temperature : Above 100°C         | - Warning lamp : ON , buzzer : OFF<br>- Pump input torque is reduced.   |
|                     | Canceled  | - Coolant temperature : Less than 100°C<br>- Hydraulic oil temperature : Less than 95°C  | - Warning lamp & buzzer : ON<br>- Pump input torque is reduced.   |
| Second step warning | Activated | - Coolant temperature : Above 107°C<br>- Hydraulic oil temperature : Above 105°C         | - Emergency warning lamp pops up on the center of LCD and the buzzer sounds.<br>- Engine speed is reduced after 10 seconds. |
|                     | Canceled  | - Coolant temperature : Less than 103°C<br>- Hydraulic oil temperature : Less than 100°C | - Return to pre-set the engine speed.<br>- Hold pump absorption torque on the first step warning.                           |
