### **3. SWING DEVICE**

# 1) WEARING PARTS

Inspection item	Standard dimension	Recommended replacement value	Counter measures
Clearance between piston and cylinder block bore	0.025	0.060	Replace piston or cylinder block
Play between piston and shoe caulking section ( $\delta$ )	0	0.3	Replace assembly of piston and shoe
Thickness of shoe (t)	8	7.7	Replace assembly of piston and shoe
Combined height of retainer plate and spherical bushing (H-h)	7.5	7.1	Replace set of retainer plate and sperical bushing
Thickness of friction plate	4.0	3.7	Replace
			H h H

#### 2) SLIDING PARTS

Part name	Standard roughness	Allowable roughness	Remark
Shoe	0.8-Z (Ra=0.2) (LAPPING)	3-Z (Ra=0.8)	
Shoe plate	0.4-Z (Ra=0.1) (LAPPING)	3-Z (Ra=0.8)	
Cylinder	1.6-Z (Ra=0.4) (LAPPING)	12.5-Z (Ra=3.2)	
Valve plate	0.8-Z (Ra=0.2) (LAPPING)	6.3-Z (Ra=1.6)	

# 4. TRAVEL MOTOR (TYPE 1)

# 1) WEARING PARTS

Inspection item	Standard dimension	Recommended replacement value	Counter measures
Clearance between piston and cylinder block bore	0.025	0.050	Replace piston or cylinder block
Play between piston and shoe caulking section(T)	0	0.3	Replace assembly of piston and shoe
Thickness of shoe(t)	4.5	4.3	Replace assembly of piston and shoe
Combined height of set plate and ball guide(H-h)	7.3	7.0	Replace set of set plate and ball guide
Thickness of friction plate	3.0	2.6	Replace
			↓ H 

#### 2) SLIDING PARTS

Part name	Standard roughness	Remark
Shoe	0.8S	-
Shoe plate	0.8S	-
Cylinder	0.8S	-
Valve plate	0.8S	-

#### ■ TRAVEL REDUCTION GEAR

The followings are the general maintenance standards. However, it is most important to determine which parts should be replaced, depending on the characteristics shown before disassembling, damages or discoloration of exterior view, the purpose of disassembling, the expected remaining service life etc..

Item	Part name	Criteria	Allowable limit	Remedy
A	Wear of planetary shaft	Smooth, without abnor- mal wear or seizure	-	Replace 3 pieces as a set
В	Condition of tooth surface	Smooth, without abnor- mal wear or seizure	Not over 1.6 of pitch- ing, no cracks at root	Replace 3 pieces as a set for planetary pinion
С	Thrust clearance of angular bearings (2)	-0.08~0.02 mm	-	Adjust shim thickness Refer to 8-101 (5)
D	Thickness of thrust washer 1 (18)	3.3~3.7 mm	Wear 0.1 mm	Replace
E	Thickness of thrust washer 2 (11)	5.3~5.7 mm	Wear 0.1 mm	Replace
F	Thickness of thrust plate (23)	4.34~4.66 mm	Wear 0.15 mm	Replace
G	Lubrication oil	2000 working hours (machine hour meter)		Replace

29097MS11

### 5. TRAVEL MOTOR (TYPE 2)

The followings are the general maintenance standards. However, it is the most important to determine which parts should be replaced, depending on the characteristics before disassembling, damages and discoloration of exterior view, the purpose of disassembling, the expected remaining service life. etc..

Che	ck item	Measuring method	Criteria	Allowable	Remedy
Sliding surface of cylinder block, valve plate and swash plate	Surface roughness of cylinder block, valve plate and swas plate	Measure the surface roughness by rough- ness tester	Below 0.4 Ζμ	Below 3.0 Zµ	Replace or repair ** Lap together the surfaces of both cylinder block and valve plate to remedy their roughness (# 1200 power)
	Swash plate - hardness of sliding surface	Measure the surface hardness of swash plate by hardness tes- ter	Over HS78	HS74	Replace
Clearance between piston and cylinder block	Outer dia of piston d max - d min	Measure outer dia of piston and bore of cylinder block at least 3	0.01 mm	0.05 mm	Replace piston or cylinder block
	Inner dia of cylinder bore D max - D min	places in the longitudinal direction with microme- ter and obtain : max outer dia = d max	0.01 mm	0.022 mm	In exchanging pistons, replace all of nine pis-
Measurement position	Clearance D-d	min outer dia = d min max inner dia = D max min inner dia = D min	0.037~ 0.047 mm	0.065 mm	tons at the sametime
Play between pis- ton and shoe	Play between calked piston and shoe ( $\delta$ )	With the jig, hold down the shoe on work stand and pull up the piston vertical direction to measure the play between piston and shoe	0~0.1 mm	0.3 mm	Replace piston

Play

Method

Jig for measuring play

Check item	Measuring method	Criteria	Allowable	Remedy
Parking brake torque	After completion of assembly, set the torque wrench on the shaft end, and measure the braking torque generat- ed when the shaft starts to rotate	92.6 kgf · m (670 lbf · ft)		Replace all of separator, friction plates and springs
Standard of replacing friction and separating plate. When measuring parking brake torque, it needs to disassemble traveling unit to motor and reduction gear portion, and it's so hard. The right allowable value is a standard of replacing friction and separating plate. If it is impossible to disassemble travel- ing unit, refer to the right value.	Measure the total thick- ness of 4 pieces of fric- tion plate and 5 pieces of separating plate.	22.76 mm	Thickness : 21.3 mm	Replace all sepa- rating and friction plates and springs.

Check item	Measuring method	Judging criteria and remedy
Shaft	Measure the wear at contacting surface of oil seal (3) with the surface roughness tester	If the depth of shaft wear is less than 0.05 mm, the shaft is reusable.
Bearings	Replace bearings (10, 51) after decided hours	<ul> <li>Replace bearings (10, 51) before hour meter of host machine indicates 10,000 hours.</li> <li>In case replacing the bearings (10, 51), replace both inner and outer races at the same time.</li> <li>Also the bearing shims (52) must be readjusted when replaced shaft (9) and/or bearings (10, 51). Contact dealers for jigs and tools required.</li> </ul>
Splines	Replace if the wear of splines exceeds the allowable value	If the wear of splines is less than 0.3 mm, the spline is reusable.
Overload relief valve	Do not try to adjust the valve, since special hydraulic test bench is required for inspecting and adjusting the pressure	Replace relief valve part as an assembly each time the host machine works for 10,000 hours.

# 6. RCV LEVER

Maintenance check item	Criteria	Remark
Leakage	The valve is to be replaced when the leakage becomes more than 1000 cc/m at neutral handle position, or more than 2000 cc/m during operation.	Conditions : Primary pressure : 30 kgf/cm <sup>2</sup> Oil viscosity : 23 cSt
Spool	This is to be replaced when the sliding surface has worn more than 10 $\mu$ m, compared with the non-sliding surface.	The leakage at the left condition is estimated to be nearly equal to the above leakage.
Push rod		
	This is to be replaced when the top end has worn more than 1 mm.	
Play at operating section	The pin, shaft, and joint of the operating section are to be replaced when their plays become more than 2 mm due to wears or so on.	When a play is due to looseness of a tightened section, adjust it.
Operation stability	When abnormal noises, hunting, primary pressure drop, etc. are generated during operation, and these cannot be remedied, referring to section 6. Troubleshooting, replace the related parts.	

Notes 1. It is desirable to replace seal materials, such as O-rings, every disassembling. However, they may be reused, after being confirmed to be free of damage.

2. When loosening the hexagon socket head cap screw (125), replace the seal washers (121) without fail.

# 7. RCV PEDAL

Maintenance check item	Criteria	Remark
Leakage	The valve is to be replaced when the leakage effect to the system. For example, the primary pressure drop.	Conditions : Primary pressure : 30 kgf/cm <sup>2</sup> Oil viscosity : 23 cSt
Spool	This is to be replaced when the sliding surface has worn more than 10 $\mu$ m, compared with the non-sliding surface.	The leakage at the left condition is estimated to be nearly equal to the above leakage.
Push rod		
	This is to be replaced when the top end has worn more than 1 mm.	
Play at operating section	The pin, shaft, and joint of the operating section are to be replaced when their plays become more than 2 mm due to wears or so on.	When a play is due to looseness of a tightened section, adjust it.
Operation stability	When abnormal noises, hunting, primary pressure drop, etc. are generated during operation, and these cannot be remedied, referring to section 6. Troubleshooting, replace the related parts.	

Notes 1. It is desirable to replace seal materials, such as O-rings, every disassembling. However, they may be reused, after being confirmed to be free of damage.

# 8. TURNING JOINT

Part name		Maintenance standards	Remedy
	Sliding surface with sealing sections.	Plating worn or peeled due to seizure or contamination.	Replace
Body, Stem	Sliding surface between body and stem other than sealing section.	• Worn abnormality or damaged more than 0.1 mm (0.0039 in) in depth due to seizure contamination.	Replace
		$\cdot$ Damaged more than 0.1 mm (0.0039 in) in depth.	Smooth with oilstone.
	Sliding surface with thrust plate.	$\cdot$ Worn more than 0.5 mm (0.02 in) or abnormality.	Replace
		$\cdot$ Worn less than 0.5 mm (0.02 in).	Smooth
		<ul> <li>Damage due to seizure or contamination remediable within wear limit (0.5 mm) (0.02 in).</li> </ul>	Smooth
Cover	Sliding surface with thrust plate.	$\cdot$ Worn more than 0.5 mm (0.02 in) or abnormality.	Replace
		$\cdot$ Worn less than 0.5 mm (0.02 in).	Smooth
		• Damage due to seizure or contamination remediable within wear limit (0.5 mm) (0.02 in).	Replace
Seal set		· Extruded excessively from seal groove square ring.	Replace
	-	Square ring	
	-	<ul> <li>Slipper ring 1.5 mm (0.059 in) narrower than seal groove, or narrower than back ring.</li> </ul>	Replace
		1.5 mm (max.)	
	-	• Worn more than 0.5 mm (0.02 in) ~ 1.5 mm (MAX.) (0.059 in)	Replace

### 9. CYLINDER

Part name	Inspecting section	Inspection item	Remedy
Piston rod	· Neck of rod pin	· Presence of crack	· Replace
	· Weld on rod hub	· Presence of crack	· Replace
	· Stepped part to which piston is attached.	· Presence of crack	· Replace
	· Threads	· Presence of crack	· Recondition or replace
	· Plated surface	<ul> <li>Plating is not worn off to base metal.</li> </ul>	· Replace or replate
		$\cdot$ Rust is not present on plating.	· Replace or replate
		· Scratches are not present.	· Recondition, replate or replace
	· Rod	· Wear of O.D.	· Recondition, replate or replace
	· Bushing at mounting part	· Wear of I.D.	· Replace
Cylinder tube	· Weld on bottom	· Presence of crack	· Replace
	· Weld on head	· Presence of crack	· Replace
	· Weld on hub	· Presence of crack	· Replace
	· Tube interior	· Presence of faults	· Replace if oil leak is seen
	· Bushing at mounting part	· Wear on inner surface	· Replace
Gland	· Bushing	· Flaw on inner surface	<ul> <li>Replace if flaw is deeper than coating</li> </ul>
