# **GROUP 2 MAJOR COMPONENT**

#### 1. MAIN PUMP

| Part name & inspection item   |  | Standard dimension  | Recommended replacement value | Countermeasures                      |
|---|--|---------------------|-------------------------------|--------------------------------------|
| Clearance<br>between piston(1) &<br>cylinder bore(2)<br>(D-d)                   | d D  | 0.038               | 0.078                         | Replace<br>piston or<br>cylinder.    |
| Play between piston(1) & shoe caulking section(3)                               | <b>‡</b>                                     | 0-0.1               | 0.35                          | Replace<br>assembly of               |
| Thickness of shoe (t)   | t d d  | 5.4                 | 5.0                           | piston & shoe.                       |
| Free height of cylinder spring(4) (L)   |  | 40.9                | 40.1                          | Replace<br>cylinder<br>spring.       |
| Combined height of set plate(5) & spherical bushing(6) (H-h)                    | h H  | 13.5                | 12.5                          | Replace<br>retainer or set<br>plate. |
| Surface roughness for valve plate(sliding                                       | Surface roughness necessary to be corrected  | 3z<br>0.4z or lower |                               |                                      |
| face)(7,8), swash plate<br>(shoe plate area)(9), &<br>cylinder(2)(sliding face) | Standard surface roughness (corrected value) |                     |                               | Lapping                              |

# 2. MAIN CONTROL VALVE

| Part name                    | Inspection item  | Remedy  |
|------------------------------|--|---|
| Casing                       | · Scratch, rust and corrosion  | <ul> <li>Replace parts that have damage on the following areas:</li> <li>Sliding surface between casing hole and spool, particularly the land area.</li> <li>Seal pocket section into which spool enters.</li> <li>Sealing area to which O-ring contact.</li> <li>Sealing area of main, travel and port relief valves.</li> <li>Other areas which may be deemed to mar normal functions.</li> </ul> |
| Spool                        | <ul> <li>Scratch, binding, rust and corrosion</li> <li>O-ring seals on both ends</li> <li>Insert spool into casing hole, rotate and stroke it.</li> </ul>                                    | <ul> <li>Replace a spool with a scratch that may be caught by your nail (particularly on an area in contact with seals).</li> <li>Replace such a spool having a scratch on its sliding surface.</li> <li>Correct or replace such a spool that may damage O-rings or that does it operate smoothly.</li> </ul>   |
| Poppet                       | Damage of poppet and spring     Insert poppet into casing and function it.   | <ul> <li>Correct or replace such a poppet that gives incomplete sealing effect.</li> <li>Poppet is normal if it functions lightly without binding.</li> </ul>   |
| Spring and associated parts  | Inspect that spring, spring seat, plugs<br>and covers are not rusted, corroded,<br>deformed and broken.  | Replace those showing excessive damage.   |
| Spool seal and related areas | Oil leakage to outside     Rusting, corrosion and deformation of seal plate  | Correct or replace.     Correct or replace.   |
| Relief valve                 | <ul> <li>External rusting and damage</li> <li>Contact surface of valve seat</li> <li>Contact surface of poppet</li> <li>Fault on springs</li> <li>O-rings, backup rings and seals</li> </ul> | <ul> <li>Replace.</li> <li>Replace one that is damaged.</li> <li>Replace one that is damaged.</li> <li>Replace.</li> <li>Replace all as a rule.</li> </ul>  |

# 3. SWING DEVICE

| Part name  | Inspection item  | Remedy                              |
|--|--|-------------------------------------|
| Balance plate  | Worn less than 0.03mm     Worn more than 0.03mm     Sliding surface has a seizure(even though small).  | Lapping     Replace.     Replace.   |
| Shoe of piston assembly                                  | <ul> <li>Sliding surface has a damage.</li> <li>Sliding surface depression( 변 )<br/>dimension less than 0.45mm or has a<br/>large damage.</li> </ul> | Lapping     Replace parts or motor. |
| Piston of piston assembly                                | Sliding surface has a seizure(even though small)   | · Replace motor.                    |
| Piston hole of cylinder assembly                         | <ul><li>Sliding surface has a sizure.</li><li>Sliding surface has a damage.</li></ul>  | Replace motor.     Replace motor.   |
| Taper roller bearing<br>Neddle bearing<br>Roller bearing | <ul><li>In case 3000hour operation</li><li>Rolling surface has a damage.</li></ul>   | Replace.     Replace.               |

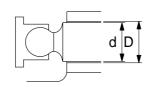

#### 4. TRAVEL MOTOR

Replace parts in accordance with the following standards. However, if a part is damaged significantly in terms of its appearance, replace it irrespective of the standards.

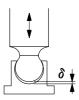

#### 1) HYDRAULIC MOTOR

| Part name & inspection item   | Standard dimension               | Recommended value for replacement | Remedy   |
|---|----------------------------------|-----------------------------------|--|
| Clearance between piston & cylinder bore  | 0.044 mm                         | 0.065 mm                          | Replacement  |
| Clearance caulked part between piston and shoe  | 0.1 mm                           | 0.3 mm                            | Replacement  |
| Thickness of shoe   | 5.5 mm                           | 5.3 mm                            | Replacement  |
| Assembled height of spherical bush and set plate  | 13.5 mm                          | 13.0 mm                           | Replacement as a set   |
| Free length of cylinder spring  | 47.9 mm                          | 47.3 mm                           | Replacement  |
| Shaft over pin dia. Output spline Cylinder spline   | 43.91( ø 4.5)<br>49.06( ø 4.5)   | 43.31 mm<br>48.46 mm              | Replacement if either one reaches replacement value.                           |
| Spline over dia. Spline in cylinder Spline in spherical bush  | 35.25( ø 5)                      | 35.75 mm                          | Replacement  |
| Thickness of separator plate Thickness of friction plate  | 2.3 mm<br>3.2 mm                 | 2.1 mm<br>3.0 mm                  | Replacement  |

| Crack and flaking of 1st/2nd/3rd planetary and pins        |                      | -                             | -                                 | Do.                                   |        |

| Part name & inspection item        | Standard<br>dimension   | Recommended<br>value for<br>replacement | Remedy  |
|------------------------------------|---|---|---|
| Radial clearance of needle bearing | 0.01-0.04 mm  | 0.07 mm                                 | Replacement of abnormal parts as a set.   |
| Crack of spline coupling area      | -   | -                                       | Replacement if such damage as crack, crevice of chipping is found.  |
| Backlash of spline coupling        | 0.1-0.3 mm  | 0.5 mm                                  | Dimension check and replacement according to following standards.   |
| Thrust ring(024)                   | 7 mm thick  | 6.6 mm                                  | Replacement if severe   |
| Thrust ring(025)                   | 5.8 mm thick  | 5.4 mm                                  | wear or seizure is found  |
| Thrust ring(026)                   | 7.8 mm thick  | 7.4 mm                                  | on sliding surface.   |
| Floating seal                      | -   | -                                       | Replacement of scratch or rust is found in sliding surface. Replacement if O-ring is deformed of damaged.   |
| Gear oil                           | Shall Spirax<br>90EP or<br>equivalent to<br>SAE # 90 API<br>Service<br>Classification<br>GL-4 | -                                       | 1st time: 500hr 2nd time and later: Every 2000hr After disassembling, fill with new oil without fail. The above time are measured with engine hour meter. |

#### **5. RCV LEVER**

| Maintenance check item    | Criteria   | Remark  |
|---------------------------|--|---|
| Leakage                   | The valve is to be replaced when the leakage becomes more than 1000cc/m at neutral handle position, or more than 2000cc/m during operation.  | Conditions: Primary pressure: 30 kgf/cm² Oil viscosity: 23cSt                           |
| Spool                     | This is to be replaced when the sliding surface has worn more than 10 µm, compared with the non-sliding surface.   | The leakage at the left condition is estimated to be nearly equal to the above leakage. |
| Push rod                  | This is to be replaced when the top end has worn more than 1mm.  |   |
| Play at operating section | The pin, shaft, and joint of the operating section are to be replaced when their plays become more than 2mm due to wears or so on.   | When a play is due to looseness of a tightened section, adjust it.                      |
| Operation stability       | When abnormal noises, hunting, primary pressure drop, etc. are generated during operation, and these cannot be remedied, referring to section 6. Troubleshooting, replace the related parts. |   |

Notes 1. It is desirable to replace seal materials, such as O-rings, every disassembling. However, they may be reused, after being confirmed to be free of damage.

2. When loosening the hexagon socket head cap screw(125), replace the seal washers(121) without fail.

#### 6. RCV PEDAL

| Maintenance check item    | Criteria  | Remark  |
|---------------------------|---|---|
| Leakage                   | The valve is to be replaced when the leakage effect to the system. For example, the primary pressure drop.  | Conditions: Primary pressure: 30kgf/cm² Oil viscosity: 23cSt                            |
| Spool                     | This is to be replaced when the sliding surface has worn more than 10 μm, compared with the non-sliding surface.  | The leakage at the left condition is estimated to be nearly equal to the above leakage. |
| Push rod                  | This is to be replaced when th top end has worn more than 1mm.  |   |
| Play at operating section | The pin, shaft, and joint of the operating section are to be replaced when their plays become more than 2mm due to wears or so on.  | When a play is due to looseness of a tightened section, adjust it.                      |
| Operation stability       | When abnormal noises, hunting, primary pressure drop, etc. are generated during operation, and these cannot be remedied, referring to section 6 troubleshooting, replace the related parts. |   |

Notes 1. It is desirable to replace seal materials, such as O-rings, every disassembling. However, they may be reused, after being confirmed to be free of damage.

# 7. TURNING JOINT

| Pa            | art name   | Maintenance standards  | Remedy                |
|---------------|--|--|-----------------------|
|               |  | Plating worn or peeled due to seizure or contamination.  | Replace               |
| Body,<br>Stem | Sliding surface<br>between body and<br>stem other than | Worn abnormality or damaged more than 0.1mm (0.0039in) in depth due to seizure contamination.                | Replace               |
| Otom          | sealing section.                                       | · Damaged more than 0.1mm(0.0039in) in depth.  | Smooth with oilstone. |
|               | Sliding surface  | $\cdot$ Worn more than 0.5mm(0.02in) or abnormality.   | Replace               |
|               | with thrust plate.                                     | · Worn less than 0.5mm(0.02in).  | Smooth                |
|               |  | <ul> <li>Damage due to seizure or contamination<br/>remediable within wear limit (0.5mm)(0.02in).</li> </ul> | Smooth                |
| Cover         | Sliding surface  | · Worn more than 0.5mm(0.02in) or abnormality.   | Replace               |
|               | with thrust plate.                                     | · Worn less than 0.5mm (0.02in).   | Smooth                |
|               |  | Damage due to seizure or contamination<br>remediable within wear limit (0.5mm)(0.02in).                      |                       |
|               | -  | Extruded excessively from seal groove square ring.  Extrusion  Square ring                                   | Replace               |
| Seal set      | -  | Slipper ring 1.5mm(0.059in) narrower than seal groove, or narrower than back ring.  1.5mm(max.) (0.059in)    | Replace               |
|               | -  | • Worn more than 0.5mm(0.02in) ~ 1.5mm(MAX.) (0.059in)   | Replace               |

# 8. CYLINDER

| Part name     | Inspecting section  | Inspection item                       | Remedy                                 |
|---------------|---|---------------------------------------|--|
| Piston rod    | · Neck of rod pin   | · Presence of crack                   | · Replace                              |
|               | · Weld on rod hub   | · Presence of crack                   | · Replace                              |
|               | <ul> <li>Stepped part to which piston is attached.</li> </ul> | · Presence of crack                   | · Replace                              |
|               | · Threads   | · Presence of crack                   | · Recondition or replace               |
|               | · Plated surface  | Plating is not worn off to base metal | · Replace or replate.                  |
|               |   | Rust is not present on plating.       | · Replace or replate                   |
|               |   | · Scratches are not present.          | · Recondition, replate or replace      |
|               | · Rod   | · Wear of outer diameter              | · Recondition, replate or replace      |
|               | · Bushing at mounting part                                    | · Wear of inner diameter              | · Replace                              |
| Cylinder tube | · Weld on bottom  | · Presence of crack                   | · Replace                              |
|               | · Weld on head  | · Presence of crack                   | · Replace                              |
|               | · Weld on hub   | · Presence of crack                   | · Replace                              |
|               | · Tube interior   | · Presence of faults                  | · Replace if oil leak is seen          |
|               | · Bushing at mounting part                                    | · Wear on inner surface               | · Replace                              |
| Cylinder head | · Bushing   | · Wear on inner surface               | · Replace                              |
|               |   | · Flaw on inner surface               | Replace if flaw is deeper than coating |
