## **GROUP 11 SELF-DIAGNOSTIC SYSTEM**

#### 1. OUTLINE

When any abnormality occurs in the ADVANCED CAPO system caused by electric parts malfunction and by open or short circuit, the MCU diagnoses the problem and sends the error codes to the cluster and also stores them in the memory.

#### 2. MONITORING

#### 1) Active fault

· The active faults of the MCU or engine ECM can be checked by this menu.

#### 2) Logged fault

• The logged faults of the MCU or engine ECM can be checked by this menu.

#### 3) Delete fault

· The logged faults of the MCU or engine ECM can be deleted by this menu.

# 3. MACHINE ERROR CODES TABLE

| Error code |     | Description  |  |  |  |
|------------|-----|--|--|--|--|
| HCESPN     | FMI | ·  |  |  |  |
| 101        | 3   | Hydraulic oil temperature sensor circuit - Voltage above normal, or shorted to high source.            |  |  |  |
|            | 4   | Hydraulic oil temperature circuit - Voltage below normal, or shorted to low source.                    |  |  |  |
|            | 0   | Working pressure sensor data above normal range.   |  |  |  |
| 105        | 1   | Working pressure sensor data below normal range.   |  |  |  |
| 100        | 2   | Working pressure sensor data error.  |  |  |  |
|            | 4   | Working pressure sensor circuit - Voltage below normal, or shorted to Low source.                      |  |  |  |
|            | 0   | Travel oil pressure sensor data above normal range.  |  |  |  |
| 108        | 1   | Travel oil pressure sensor data below normal range.  |  |  |  |
| 100        | 2   | Travel oil pressure sensor data error.   |  |  |  |
|            | 4   | Travel oil pressure sensor circuit - Voltage below normal, or shorted to low source.                   |  |  |  |
|            | 0   | Main pump 1 (P1) pressure sensor data above normal range.  |  |  |  |
|            | 1   | Main pump 1 (P1) pressure sensor data below normal range.  |  |  |  |
| 120        | 2   | Main pump 1 (P1) pressure sensor data error.   |  |  |  |
|            | 4   | Main pump 1 (P1) pressure sensor circuit - Voltage below normal, or shorted to low source.             |  |  |  |
|            | 0   | Main pump 2 (P2) pressure sensor data above normal range.  |  |  |  |
|            | 1   | Main pump 2 (P2) pressure sensor data below normal range.  |  |  |  |
| 121        | 2   | Main pump 2 (P2) pressure sensor data error.   |  |  |  |
|            | 4   | Main pump 2 (P2) pressure sensor circuit - Voltage below normal, or shorted to low source.             |  |  |  |
|            | 0   | Overhead pressure sensor data above normal range.  |  |  |  |
| 122        | 1   | Overhead pressure sensor data below normal range.  |  |  |  |
| 122        | 2   | Overhead pressure sensor data error.   |  |  |  |
|            | 4   | Overhead pressure sensor circuit - Voltage below normal, or shorted to low source.                     |  |  |  |
|            | 0   | Negative 1 pressure sensor data above normal range.  |  |  |  |
| 123        | 1   | Negative 1 pressure sensor data below normal range.  |  |  |  |
| 123        | 2   | Negative 1 pressure sensor data error.   |  |  |  |
|            | 4   | Negative 1 pressure sensor circuit - Voltage below normal, or shorted to low source.                   |  |  |  |
|            | 0   | Negative 2 Pressure sensor data above normal range.  |  |  |  |
| 124        | 1   | Negative 2 Pressure sensor data below normal range.  |  |  |  |
| 124        | 2   | Negative 2 Pressure sensor data error.   |  |  |  |
|            | 4   | Negative 2 Pressure sensor circuit - Voltage below normal, or shorted to low source.                   |  |  |  |
|            | 0   | Pilot pump (P3) pressure sensor data above normal range.   |  |  |  |
| 125        | 1   | Pilot pump (P3) pressure sensor data below normal range.   |  |  |  |
| 125        | 2   | Pilot pump (P3) pressure sensor data error.  |  |  |  |
|            | 4   | Pilot pump (P3) pressure sensor circuit - Voltage below normal, or shorted to low source.              |  |  |  |
|            | 0   | Boom up pilot pressure sensor data above normal range.   |  |  |  |
| 127        | 1   | Boom up pilot pressure sensor data below normal range.   |  |  |  |
|            | 2   | Boom up pilot pressure sensor data error.  |  |  |  |
|            | 4   | Boom up pilot pressure sensor circuit - Voltage below normal, or shorted to low source.                |  |  |  |
|            | 0   | Arm in/out & bucket in pilot pressure sensor data above normal range.                                  |  |  |  |
|            | 1   | Arm in/out & bucket in pilot pressure sensor data below normal range.                                  |  |  |  |
| 133        | 2   | Arm in/out & bucket in pilot pressure sensor data error.   |  |  |  |
|            | 4   | Arm in/out & bucket in pilot pressure sensor circuit - Voltage below normal, or shorted to low source. |  |  |  |

### 4. ENGINE FAULT CODE

| Fault code<br>J1939 SPN<br>J1939 FMI | Reason  | Effect (only when fault code is active)   |
|--------------------------------------|---|---|
| 111<br>629<br>12                     | Engine control module critical internal failure -<br>Bad intelligent device or component. Error<br>internal to the ECM related to memory hardware<br>failures or internal ECM voltage supply circuits.                            | Possible no noticeable performance effects, engine dying, or hard starting.                   |
| 115<br>612<br>2                      | Engine magnetic crankshaft speed/position lost both of two signals - Data erratic, intermittent, or incorrect. The ECM has detected that the primary engine speed sensor and the backup engine speed sensor signals are reversed. | Fueling to injectors is disabled and the engine can not be started.                           |
| 122<br>102<br>3                      | Intake manifold 1 pressure sensor circuit -<br>Voltage above normal, or shorted to high source.<br>High signal voltage detected at the intake<br>manifold pressure circuit.   | Engine power derate.  |
| 123<br>102<br>4                      | Intake manifold 1 pressure sensor circuit -<br>Voltage below normal, or shorted to low Source.<br>Low signal voltage or open circuit detected at the<br>intake manifold pressure circuit.   | Engine power derate.  |
| 124<br>102<br>16                     | Intake manifold 1 pressure - Data valid but above normal operational range - Moderately severe level. Intake manifold pressure has exceeded the maximum limit for the given engine rating.  | Engine power derate.  |
| 131<br>91<br>3                       | Accelerator pedal or lever position sensor 1 circuit - Voltage above normal, or shorted to high source. High voltage detected at accelerator pedal position circuit.  | Severe derate in power output of the engine.<br>Limp home power only.                         |
| 132<br>91<br>4                       | Accelerator pedal or lever position sensor 1 circuit - Voltage below normal, or shorted to low source. Low voltage detected at accelerator pedal position signal circuit.   | Severe derate in power output of the engine.<br>Limp home power only.                         |
| 133<br>974<br>3                      | Remote accelerator pedal or lever position sensor 1 circuit - Voltage above normal, or shorted to high source. High voltage detected at remote accelerator pedal position circuit.  | Remote accelerator will not operate. Remote accelerator position will be set to zero percent. |
| 134<br>974<br>4                      | Remote accelerator pedal or lever position sensor 1 circuit - Voltage below normal, or shorted to low source. Low voltage detected at remote accelerator pedal position signal circuit.   | Remote accelerator will not operate. Remote accelerator position will be set to zero percent. |
| 135<br>100<br>3                      | Engine oil rifle pressure 1 sensor circuit - Voltage above normal, or shorted to high source. High signal voltage detected at the engine oil pressure circuit.  | None on performance. No engine protection for oil pressure.                                   |
| 141<br>100<br>4                      | Engine oil rifle pressure 1 sensor circuit - Voltage<br>below normal, or shorted to low source. Low<br>signal voltage detected at engine oil pressure<br>circuit.   | None on performance. No engine protection for oil pressure.                                   |
| 143<br>100<br>18                     | Engine oil rifle pressure - Data valid but below<br>normal operational range - Moderately severe<br>level. Engine oil pressure signal indicates engine<br>oil pressure is below the engine protection<br>warning limit.           | Engine power derate.  |

<sup>\*</sup> Some fault codes are not applied to this machine.

| Fault code<br>J1939 SPN<br>J1939 FMI | Reason  | Effect (only when fault code is active)   |
|--------------------------------------|---|---|
| 144<br>110<br>3                      | Engine coolant temperature 1 sensor circuit - Voltage above normal, or shorted to high source. High signal voltage or open circuit detected at engine coolant temperature circuit.  | Possible white smoke. Fan will stay ON if controlled by ECM. No engine protection for engine coolant temperature.   |
| 145<br>110<br>4                      | Engine Coolant Temperature 1 Sensor Circuit - Voltage Below Normal, or Shorted to Low Source. Low signal voltage detected at engine coolant temperature circuit.  | Possible white smoke. Fan will stay ON if controlled by ECM. No engine protection for engine coolant temperature.   |
| 146<br>110<br>16                     | Engine Coolant Temperature - Data Valid but<br>Above Normal Operational Range - Moderately<br>Severe Level. Engine coolant temperature<br>signal indicates engine coolant temperature is<br>above engine protection warning limit.      | Progressive power derate increasing in severity from time of alert.   |
| 147<br>91<br>1                       | Accelerator Pedal or Lever Position 1 Sensor Circuit Frequency - Data Valid but Below Normal Operational Range - Most Severe Level. A frequency of less than 100 Hz has been detected at the frequency throttle input to the ECM.       | Severe derate in power output of the engine.<br>Limp home power only.   |
| 148<br>91<br>0                       | Accelerator Pedal or Lever Position Sensor 1 - Data Valid but Above Normal Operational Range - Most Severe Level. A frequency of more than 1500 Hz has been detected at the frequency throttle input to the ECM.                        | Severe derate in power output of the engine.<br>Limp home power only.   |
| 151<br>110<br>0                      | Engine Coolant Temperature - Data Valid but<br>Above Normal Operational Range - Most<br>Severe Level. Engine coolant temperature<br>signal indicates engine coolant temperature<br>above engine protection critical limit.              | Progressive power derate increasing in severity from time of alert. If Engine Protection Shutdown feature is enabled, engine will shut down 30 seconds after Red Stop Lamp starts flashing. |
| 153<br>105<br>3                      | Intake Manifold 1 Temperature Sensor Circuit - Voltage Above Normal, or Shorted to High Source. High signal voltage detected at intake manifold air temperature circuit.  | Possible white smoke. Fan will stay ON if controlled by ECM. No engine protection for intake manifold air temperature.  |
| 154<br>105<br>4                      | Intake Manifold 1 Temperature Sensor Circuit - Voltage Below Normal, or Shorted to Low Source. Low signal voltage detected at intake manifold air temperature circuit.  | Possible white smoke. Fan will stay ON if controlled by ECM. No engine protection for intake manifold air temperature.  |
| 155<br>105<br>0                      | Intake Manifold 1 Temperature - Data Valid but<br>Above Normal Operational Range - Most<br>Severe Level. Intake manifold air temperature<br>signal indicates intake manifold air temperature<br>above engine protection critical limit. | Progressive power derate increasing in severity from time of alert. If Engine Protection Shutdown feature is enabled, engine will shut down 30 seconds after Red Stop Lamp starts flashing. |
| 187<br>3510<br>4                     | Sensor Supply 2 Circuit - Voltage Below<br>Normal, or Shorted to Low Source. Low voltage<br>detected at the sensor supply number 2 circuit.   | Engine power derate.  |
| 195<br>111<br>3                      | Coolant Level Sensor 1 Circuit - Voltage Above Normal, or Shorted to High Source. High signal voltage detected at engine coolant level circuit.   | None on performance.  |
| 196<br>111<br>4                      | Coolant Level Sensor 1 Circuit - Voltage Below Normal, or Shorted to Low Source. Low signal voltage detected at engine coolant level circuit.   | None on performance.  |

<sup>\*</sup> Some fault codes are not applied to this machine.

| Fault code<br>J1939 SPN<br>J1939 FMI | Reason  | Effect (only when fault code is active)   |
|--------------------------------------|---|---|
| 197<br>111<br>18                     | Coolant Level - Data Valid but Below Normal Operational Range - Moderately Severe Level. Low coolant level has been detected.   | Possible power derate and possible engine shutdown if the Engine Protection Shutdown feature is enabled.  |
| 221<br>108<br>3                      | Barometric Pressure Sensor Circuit - Voltage<br>Above Normal, or Shorted to High Source. High<br>signal voltage detected at barometric pressure<br>circuit.                     | Engine power derate.  |
| 222<br>108<br>4                      | Barometric Pressure Sensor Circuit - Voltage<br>Below Normal, or Shorted to Low Source. Low<br>signal voltage detected at barometric pressure<br>circuit.                       | Engine power derate.  |
| 227<br>3510<br>3                     | Sensor Supply 2 Circuit - Voltage Above<br>Normal, or Shorted to High Source. High<br>voltage detected at sensor supply number 2<br>circuit.                                    | Engine power derate.  |
| 234<br>190<br>0                      | Engine Crankshaft Speed/Position - Data Valid but Above Normal Operational Range - Most Severe Level. Engine speed signal indicates engine speed above engine protection limit. | Fuel injection disabled until engine speed falls below the overspeed limit.   |
| 235<br>111<br>1                      | Coolant Level - Data Valid but Below Normal Operational Range - Most Severe Level. Low engine coolant level detected.   | Engine protection shutdown.   |
| 238<br>3511<br>4                     | Sensor Supply 3 Circuit - Voltage Below Normal, or Shorted to Low Source. Low voltage detected on the +5 volt sensor supply circuit to the engine speed sensor.                 | Possible hard starting and rough running.   |
| 239<br>3511<br>3                     | Sensor Supply 3 Circuit - Voltage Above Normal or Shorted to High Source. High voltage detected on the 5 volt sensor supply circuit to the engine speed sensor.                 | Possible hard starting and rough running.   |
| 241<br>84<br>2                       | Wheel-based vehicle speed - Data erratic, intermittent, or incorrect. The ECM lost the vehicle speed signal.  | Engine speed limited to ,maximum engine speed without VSS parameter value. Cruise control, gear-down protection, and road speed governor will not work. |
| 245<br>647<br>4                      | Fan control circuit - Voltage below normal, or shorted to low source. Low signal voltage detected at the fan control circuit when commanded on.                                 | The fan may stay on continuously or not run at all.   |
| 271<br>1347<br>4                     | Fuel pump pressurizing assembly 1 circuit - Voltage below normal, or shorted to low source. Low signal voltage detected at the fuel pump actuator circuit.                      | Engine will run poorly at idle. Engine will have low power. Fuel pressure will be higher than commanded.  |
| 272<br>1347<br>3                     | Fuel pump pressurizing assembly 1 circuit - Voltage above normal, or shorted to high source. High signal voltage or open circuit detected at the fuel pump actuator circuit.    | Engine will not run or engine will run poorly.  |
| 281<br>1347<br>7                     | Fuel pump pressurizing assembly 1 - Mechanical system not responding properly or out of adjustment.   | Engine will not run or possible low power.  |

 $<sup>\</sup>ensuremath{\,\mathbb{X}\,}$  Some fault codes are not applied to this machine.

| Fault code<br>J1939 SPN<br>J1939 FMI | Reason  | Effect (only when fault code is active)  |
|--------------------------------------|---|--|
| 285<br>639<br>9                      | SAE J1939 multiplexing PGN timeout error -<br>Abnormal update rate. The ECM expected<br>information from a multiplexed device but did<br>not receive it soon enough or did not receive it<br>at all.                        | At least one multiplexed device will not operate properly.   |
| 286<br>639<br>13                     | SAE J1939 multiplexing configuration error - Out of calibration. The ECM expected information from a multiplexed device but only received a portion of the necessary information.   | At least one multiplexed device will not operate properly.   |
| 287<br>91<br>19                      | SAE J1939 multiplexed accelerator pedal or lever sensor system - received network data In error. The OEM vehicle electronic control unit (VECM) detected a fault with its accelerator pedal.                                | Engine may only idle or engine will not accelerate to full speed.  |
| 288<br>974<br>19                     | SAE J1939 Multiplexing Remote Accelerator<br>Pedal or Lever Position Sensor Circuit -<br>Received Network Data In Error. The OEM<br>vehicle electronic control unit (VECM) detected<br>a fault with the remote accelerator. | The engine will not respond to the remote throttle. Engine may only idle. The primary or cab accelerator may be able to be used. |
| 292<br>441<br>14                     | Auxiliary temperature Sensor Input 1 - Special instructions.  | Possible engine power derate.  |
| 293<br>441<br>3                      | Auxiliary temperature sensor input 1 circuit - Voltage above normal, or shorted to high source. High signal voltage or open circuit detected at the OEM auxiliary temperature circuit.                                      | None on performance.   |
| 294<br>441<br>4                      | Auxiliary temperature sensor input 1 circuit - Voltage below normal, or shorted to low source. Low signal voltage detected at the OEM auxiliary temperature circuit.  | None on performance.   |
| 295<br>108<br>2                      | Barometric Pressure - Data Erratic, Intermittent, or Incorrect. An error in the barometric pressure sensor signal was detected by the ECM.  | Engine power derate.   |
| 296<br>1388<br>14                    | Auxiliary pressure sensor input 2 - Special instructions.   | Possible engine power derate.  |
| 297<br>1388<br>3                     | Auxiliary pressure sensor input 2 circuit - Voltage above normal, or shorted to high source. High signal voltage detected at the OEM pressure circuit.  | None on performance.   |
| 298<br>1388<br>4                     | Auxiliary pressure sensor input 2 circuit - Voltage below normal, or shorted to low source. Low signal voltage or open circuit detected at the OEM pressure circuit.  | None on performance.   |
| 319<br>251<br>2                      | Real time clock power interrupt - Data erratic, intermittent, or incorrect. Real time clock lost power.   | None on performance. Data in the ECM will not have accurate time and date information.   |
| 322<br>651<br>5                      | Injector solenoid driver cylinder 1 circuit - Current below normal, or open circuit. Current detected at injector 1 when voltage is turned OFF.   | The current to the injector is shut OFF. The engine can possibly misfire or run rough.   |

<sup>\*</sup> Some fault codes are not applied to this machine.

| Fault code<br>J1939 SPN<br>J1939 FMI | Reason   | Effect (only when fault code is active)   |
|--------------------------------------|--|---|
| 323<br>656<br>5                      | Injector solenoid driver cylinder 5 circuit - Current below normal, or open circuit. Current detected at injector 5 when voltage is turned OFF.  | The current to the injector is shut OFF. The engine can possibly misfire or run rough.  |
| 324<br>653<br>5                      | Injector solenoid driver cylinder 3 circuit -<br>Current below normal, or open circuit.<br>Current detected at injector 3 when voltage is<br>turned OFF.   | The current to the injector is shut OFF. The engine can possibly misfire or run rough.  |
| 325<br>656<br>5                      | Injector solenoid driver cylinder 6 circuit - Current below normal, or open circuit. Current detected at injector 6 when voltage is turned OFF.  | The current to the injector is shut OFF. The engine can possibly misfire or run rough.  |
| 331<br>652<br>5                      | Injector solenoid driver cylinder 2 circuit - Current below normal, or open circuit. Current detected at injector 2 when voltage is turned OFF.  | The current to the injector is shut OFF. The engine can possibly misfire or run rough.  |
| 332<br>654<br>5                      | Injector solenoid driver cylinder 4 circuit - Current below normal, or open circuit. Current detected at injector 4 when voltage is turned OFF.  | The current to the injector is shut OFF. The engine can possibly misfire or run rough.  |
| 334<br>110<br>2                      | Engine coolant temperature - Data erratic, intermittent, or incorrect. The engine coolant temperature reading is not changing with engine operating conditions.  | The ECM will estimate engine coolant temperature.   |
| 342<br>630<br>13                     | Electronic calibration code incompatibility - Out of calibration. An incompatible calibration has been detected in the ECM.  | Possible no noticeable performance effects, engine dying, or hard starting.   |
| 343<br>629<br>12                     | Engine control module warning internal hardware failure - Bad intelligent device or component. Internal ECM failure.   | No performance effects or possible severe power derate.   |
| 351<br>627<br>12                     | Injector power supply - Bad intelligent device or component. The ECM measured injector boost voltage is low.   |   |
| 352<br>3509<br>4                     | Sensor supply 1 circuit - Voltage below normal, or shorted to low source. Low voltage detected at sensor supply number 1 circuit.  | Engine power derate.  |
| 386<br>3509<br>3                     | Sensor supply 1 circuit - Voltage above normal, or shorted to high source. High voltage detected at sensor supply number 1 circuit.  | Engine power derate.  |
| 415<br>100<br>1                      | Engine oil rifle pressure - Data valid but below normal operational range - Most severe level. Oil pressure signal indicates oil pressure below the engine protection critical limit.                        | Progressive power derate increasing in severity from time of alert. If engine protection shutdown feature is enabled, engine will shut down 30 seconds after red stop lamp starts flashing.     |
| 418<br>97<br>15                      | Water in fuel indicator - Data valid but above normal operational range - Least severe level. water has been detected in the fuel filter.  | Possible white smoke, loss of power, or hard starting.  |
| 421<br>175<br>0                      | Engine Oil Temperature - Data Valid But Above<br>Normal Operating Range - Most Severe Level.<br>Engine oil temperature signal indicates engine<br>oil temperature above engine protection critical<br>limit. | Progressive speed derate increasing in severity from time of alert. If the Engine Protection Shutdown feature is enabled, engine will shut down 30 seconds after red STOP lamp starts flashing. |

<sup>\*</sup> Some fault codes are not applied to this machine.

| Fault code             | D   | Effect (see Least 19 |
|------------------------|---|---|
| J1939 SPN<br>J1939 FMI | Reason  | Effect (only when fault code is active)   |
| 426<br>639<br>2        | SAE J1939 Data Link-Data Erratic, Intermittent, or Incorrect. Communication between the ECM and another device on the SAE J1939 data link has been lost.  | None on performance.<br>SAE J1939 data link devices possibly do not operate.  |
| 428<br>97<br>3         | Water in fuel indicator sensor circuit - Voltage above normal, or shorted to high source. High voltage detected at the water in fuel circuit.   | None on performance. No water in fuel warning available.  |
| 429<br>97<br>4         | Water in fuel indicator sensor circuit - Voltage below normal, or shorted to low source.  Low voltage detected at the water in fuel circuit.  | None on performance. No water in fuel warning available.  |
| 431<br>558<br>2        | Accelerator pedal or lever idle validation switch - Data erratic, intermittent, or incorrect. Voltage detected simultaneously on both idle validation and off-idle validation switches.   | Engine will only idle.  |
| 432<br>558<br>13       | Accelerator pedal or lever idle validation circuit - Out of calibration. Voltage at idle validation on-idle and off-idle circuit does not match accelerator pedal position.   | Engine will only idle.  |
| 435<br>100<br>2        | Engine oil rifle pressure - Data erratic, intermittent, or incorrect. An error in the engine oil pressure switch signal was detected by the ECM.  | None on performance. No engine protection for oil pressure.   |
| 441<br>168<br>18       | Battery 1 voltage - Data valid but below normal operational range - Moderately severe level. ECM supply voltage is below the minimum system voltage level.  | Engine may stop running or be difficult to start.   |
| 442<br>168<br>16       | Battery 1 Voltage - Data valid but above normal operational range - Moderately severe level. ECM supply voltage is above the maximum system voltage level.  | Possible electrical damage to all electrical components.  |
| 449<br>157<br>0        | Injector metering rail 1 pressure - Data valid but above normal operational range - Most severe level.  | None or possible engine noise associated with higher injection pressures (especially at idle or light load). Engine power is reduced.   |
| 451<br>157<br>3        | Injector metering rail 1 pressure sensor circuit - Voltage above normal, or shorted to high source. High signal voltage detected at the rail fuel pressure sensor circuit.  | Power and or speed derate.  |
| 452<br>157<br>4        | Injector metering rail 1 pressure sensor circuit -<br>Voltage below normal, or shorted to low source.<br>Low signal voltage detected at the rail fuel<br>pressure sensor circuit.   | Power and or speed derate.  |
| 488<br>105<br>16       | Intake manifold 1 temperature - Data valid but above normal operational range - Moderately severe level. Intake manifold air temperature signal indicates intake manifold air temperature is above the engine protection warning limit. | Progressive power derate increasing in severity from time of alert.   |
| 497<br>1377<br>2       | Multiple unit synchronization switch - Data erratic, intermittent, or incorrect.  Multiple unit synchronous ON/OFF switch and multiple unit synchronous complimentary ON/OFF switch have different values in the ECM.                   | Multiple unit synchronization feature is disabled.  |

| Fault code<br>J1939 SPN<br>J1939 FMI | Reason  | Effect (only when fault code is active)  |
|--------------------------------------|---|--|
| 515<br>3514<br>3                     | Sensor Supply 6 Circuit - Voltage Above Normal or Shorted to High Source. High voltage detected on the +5 volt sensor supply circuit to the fuel rail pressure sensor.  | Engine power derate.   |
| 516<br>3514<br>4                     | Sensor Supply 6 Circuit - Voltage Below Normal or Shorted to Low Source.  Low voltage detected on the +5 volt sensor supply circuit to the fuel rail pressure sensor.   | Engine power derate.   |
| 523<br>611<br>2                      | Auxiliary intermediate (PTO) speed switch validation - Data erratic, intermittent, or incorrect. The position of the intermediate speed control switch 1 does not match the position of the intermediate speed control validation switch. | Intermediate speed control switch may not operate correctly.   |
| 527<br>702<br>3                      | Auxiliary input/output 2 circuit - Voltage above normal, or shorted to high source. High signal voltage or open circuit has been detected at the auxiliary input/output 2 circuit.  | None on performance.   |
| 528<br>93<br>2                       | Auxiliary alternate torque validation switch - Data erratic, intermittent, or incorrect. An error has been detected in the alternate torque switch circuit.   | Torque curve setting defaults to default curve.  |
| 529<br>703<br>3                      | Auxiliary input/output 3 circuit - Voltage above normal, or shorted to high source. High signal voltage has been detected at the auxiliary input/output 3 circuit.  | None on performance.   |
| 553<br>157<br>16                     | Injector metering rail 1 pressure - Data valid but above normal operational range - Moderately severe level. The ECM has detected that fuel pressure is higher than commanded pressure.   | None or possible engine noise associated with higher injection pressures (especially at idle or light load).  Possible reduced engine performance. |
| 554<br>157<br>2                      | Injector metering rail 1 pressure - Data erratic, Intermittent, or incorrect. The ECM has detected that the fuel pressure signal is not changing.   | Possibly hard to start, low power, or engine smoke.  |
| 555<br>101<br>16                     | Crankcase Pressure - Data Valid but Above<br>Normal Operational Range - Moderately<br>Severe Level. The crankcase breather filter<br>requires maintenance.  | None on performance.   |
| 556<br>101<br>0                      | Crankcase Pressure - Data Valid but Above<br>Normal Operational Range - Most Severe<br>Level. The crankcase breather filter requires<br>maintenance.  | None on performance.   |
| 559<br>157<br>18                     | Injector metering rail 1 pressure - Data Valid but<br>Below Normal Operational Range - Moderately<br>Severe Level. The ECM has detected that fuel<br>pressure is lower than commanded pressure.   | Possibly hard to start or low power. Engine could possibly <b>not</b> start.   |

 $<sup>\</sup>ensuremath{\,\%\,}$  Some fault codes are not applied to this machine.

| Fault code<br>J1939 SPN | Reason  | Effect (only when fault code is active)  |
|-------------------------|---|--|
| J1939 FMI<br>584        | Starter relay driver circuit - Voltage above  | Either the engine will not start or the engine will  |
| 677                     | normal, or shorted to high source. Open circuit or high voltage detected at starter lockout circuit.  | not have starter lockout protection.  The engine will not have starter lockout protection. |
| 585<br>677<br>4         | Starter relay driver circuit - Voltage below normal, or shorted to low source. Low voltage detected at starter lockout circuit.   | The engine will <b>not</b> have starter lockout protection.                                |
| 595<br>103<br>0         | Turbocharger 1 Speed - Data Valid But Above<br>Normal Operating Range - Moderately Severe<br>Level. High turbocharger speed has been<br>detected by the ECM.                                  | Engine power derate. The ECM uses an estimated turbocharger speed.                         |
| 596<br>167<br>16        | Electrical Charging System Voltage - Data Valid<br>But Above Normal Operational Range -<br>Moderately Severe Level. High battery voltage<br>detected by the battery voltage monitor feature.  | Amber warning lamp illuminated until high battery voltage condition is corrected.          |
| 597<br>167<br>18        | Electrical Charging System Voltage - Data Valid<br>But Below Normal Operational Range -<br>Moderately Severe Level. Low battery voltage<br>detected by the battery voltage monitor feature.   | Amber lamp will light until low battery voltage condition is corrected.                    |
| 598<br>167<br>1         | Electrical Charging System Voltage - Data Valid<br>But Below Normal Operational Range - Most<br>Severe Level. Very low battery voltage detected<br>by the battery voltage monitor feature.    | Red lamp illuminated until very low battery voltage condition is corrected.                |
| 599<br>640<br>14        | Auxiliary commanded dual output shutdown - Special instructions. The engine protection limit has been exceeded for the dual outputs calibrated limits.  | Engine will shut down.   |
| 649<br>1378<br>31       | Engine Oil Change Interval - Condition Exists. Change engine oil and filter.  | Maintenance reminder <b>only</b> .   |
| 687<br>103<br>18        | Turbocharger 1 speed - Data valid but below normal operational range - Moderately severe level. Low turbocharger speed detected by the ECM.   | Engine power derate. The ECM uses an estimated turbocharger speed.                         |
| 689<br>190<br>2         | Engine crankshaft speed/position - Data erratic, intermittent, or incorrect. The ECM has detected an error in the engine speed signal.  | Possible reduced engine performance.   |
| 691<br>1172<br>3        | Turbocharger 1 compressor inlet temperature circuit - Voltage above normal, or shorted to high source. High signal voltage detected at turbocharger compressor inlet air temperature circuit. | Engine power derate.   |
| 692<br>1172<br>4        | Turbocharger 1 compressor inlet temperature circuit - Voltage below normal, or shorted to low source. Low signal voltage detected at turbocharger compressor inlet air temperature circuit.   | Engine power derate.   |

<sup>\*</sup> Some fault codes are not applied to this machine.

| Fault code<br>J1939 SPN<br>J1939 FMI | Reason   | Effect (only when fault code is active)  |
|--------------------------------------|--|--|
| 697<br>1136<br>3                     | Engine ECU Temperature Sensor Circuit - Voltage Above normal, or Shorted to High source. High signal voltage or open circuit detected at the internal ECM temperature sensor.  | None on performance.   |
| 698<br>1136<br>4                     | Engine ECU Temperature Sensor Circuit - Voltage Below Normal, or Shorted to Low Source. Low signal voltage detected at the internal ECM temperature sensor.  | None on performance.   |
| 731<br>723<br>7                      | Engine speed / position camshaft and crankshaft misalignment - Mechanical system not responding properly or out of adjustment. Engine position signal from the crankshaft position sensor and camshaft position sensor do not match.                 | Excessive smoke, hard start, and rough idle possible. Possible reduced engine performance.   |
| 778<br>723<br>2                      | Engine camshaft speed / position sensor - Data erratic, intermittent, or incorrect. The ECM has detected an error in the camshaft position sensor signal.  | Possible reduced engine performance and/or reduced starting capability. Engine runs using primary engine position sensor.  |
| 779<br>703<br>11                     | Auxiliary equipment sensor input 3 - Root cause not known.   | Possible engine derate.  |
| 1117<br>627<br>2                     | Power supply lost with ignition on - Data erratic, intermittent, or incorrect. Supply voltage to the ECM fell below 6.2 volts momentarily, or the ECM was not allowed to power down correctly (retain battery voltage for 30 seconds after key OFF). | Possible no noticeable performance effects or engine dying or hard starting. Fault code information, trip information, and maintenance monitor data can be inaccurate. |
| 1239<br>2623<br>3                    | Accelerator Pedal or Lever Position Sensor 2<br>Circuit - Voltage Above Normal or Shorted to<br>High Source. High voltage detected at<br>accelerator pedal position number 2 signal<br>circuit.  | Severe derate in power output of the engine.<br>Limp home power only.  |
| 1241<br>2623<br>4                    | Accelerator Pedal or Lever Position Sensor 2<br>Circuit - Voltage Below Normal or Shorted to<br>Low Source. Low voltage detected at<br>accelerator pedal position number 2 signal<br>circuit.  | Severe derate in the power output of the engine. Limp home power only.   |
| 1242<br>91<br>2                      | Accelerator Pedal or Lever Position Sensor 1 and 2 - Data Erratic, Intermittent, or Incorrect. Accelerator position sensor number 1 and number 2 are reading different values.   | The engine will only idle.   |
| 1515<br>91<br>19                     | SAE J1939 Multiplexed Accelerator Pedal or<br>Lever Sensor System - Received Network Data<br>In Error. The J1939 multiplexing controller has<br>indicated a malfunction of the multiplexed<br>accelerator pedal.                                     | The engine will only idle.   |

 $<sup>\</sup>ensuremath{\,\mathbb{X}\,}$  Some fault codes are not applied to this machine.

| 2375<br>412<br>3                     | Exhaust Gas Recirculation Temperature Sensor Circuit - Voltage Above Normal or Shorted to High Source. High signal voltage detected at EGR temperature circuit.  | EGR valve actuation will be disabled.                              |
| 2376<br>412<br>4                     | Exhaust Gas Recirculation Temperature Sensor Circuit - Voltage Below Normal or Shorted to Low Source. Low signal voltage detected at EGR temperature circuit.  | EGR valve actuation will be disabled.                              |
| 2377<br>647<br>3                     | Fan control circuit - Voltage above normal, or shorted to high source. Open circuit or high voltage detected at the fan control circuit.   | The fan can stay on continuously or <b>not</b> run at all.         |
| 2387<br>641<br>7                     | VGT Actuator Driver Circuit (Motor) - Mechanical System Not Responding or Out of Adjustment. The smart VGT controller has detected incorrect stop limits, or the VGT is unable to move to the closed position. | VGT travel may be limited.   |
| 2448<br>111<br>17                    | Coolant Level - Data Valid But Below Normal Operational Range - Least Severe Level. Low engine coolant level detected.   | None on performance.   |
| 2449<br>641<br>13                    | VGT Actuator Controller - Out of Calibration.<br>The VGT actuator has been installed incorrectly.  | VGT actuation will be disabled.                                    |
| 2554<br>1209<br>2                    | Exhaust Gas Pressure - Data Erratic, Intermittent or Incorrect. The exhaust gas pressure sensor is reading an erratic value.   | The ECM will estimate the exhaust gas pressure.                    |
| 2555<br>729<br>3                     | Intake air heater 1 circuit - Voltage above normal, or shorted to high source. High voltage detected at the intake air heater signal circuit.  | The intake air heaters may be ON or OFF all the time.              |
| 2556<br>729<br>4                     | Intake air heater 1 circuit - Voltage below normal, or shorted to low source. Low voltage detected at the intake air heater signal circuit.  | The intake air heaters may be ON or OFF all the time.              |

<sup>\*</sup> Some fault codes are not applied to this machine.

| Fault code<br>J1939 SPN<br>J1939 FMI | Reason  | Effect (only when fault code is active)  |
|--------------------------------------|---|--|
| 2557<br>697<br>3                     | Auxiliary PWM driver 1 circuit - Voltage above normal, or shorted to high source. High signal voltage detected at the analog torque circuit.  | Can not control transmission.  |
| 2558<br>697<br>4                     | Auxiliary PWM driver 1 circuit - Voltage below normal, or shorted to low source. Low signal voltage detected at the analog torque circuit.  | Can not control transmission.  |
| 2634<br>641<br>12                    | VGT Actuator Controller - Bad Intelligent Device or Component. An internal error has been detected by the smart VGT controller.   | VGT actuation will be disabled.  |
| 2635<br>641<br>31                    | VGT Actuator Driver Circuit - Condition Exists. A calibration mismatch between the VGT actuator and the ECM has been detected.  | VGT actuation will be disabled.  |
| 2636<br>641<br>9                     | VGT Actuator Driver Circuit - Abnormal Update<br>Rate. No communications on the J1939 data<br>link between the engine ECM and the smart<br>VGT controller.  | The VGT will move to the default open position.  |
| 2637<br>5018<br>11                   | Aftertreatment Diesel Oxidation Catalyst Face Plugged - Root Cause Not Known. The front face of the aftertreatment diesel oxidation catalyst has been detected to be plugged with soot.   | Active aftertreatment diesel particulate filter regeneration will be disabled.   |
| 2639<br>3251<br>15                   | Aftertreatment Diesel Particulate Filter Differential Pressure - Data Valid But Above Normal Operating Range - Least Severe Level. The soot load of the aftertreatment diesel particulate filter has exceeded the recommended limits.           | The aftertreatment diesel particulate filter lamp will be illuminated and will begin to flash as the severity of the soot load increases. Possible engine protection derate based on severity. |
| 2732<br>4097<br>3                    | Aftertreatment Fuel Drain Valve Circuit - Voltage Above Normal or Shorted to High Source. High signal voltage detected at the aftertreatment fuel drain valve circuit.  | Active aftertreatment diesel particulate filter regeneration will be disabled.   |
| 2733<br>4097<br>4                    | Aftertreatment Fuel Drain Valve Circuit - Voltage Below Normal or Shorted to Low Source. Low signal voltage detected at the aftertreatment fuel drain valve circuit.  | Active aftertreatment diesel particulate filter regeneration will be disabled.   |
| 2741<br>3482<br>31                   | Aftertreatment Fuel Shutoff Valve 1 Swapped - Condition Exists. Aftertreatment fuel shutoff valve 1 and aftertreatment fuel drain valve wiring harness connections are reversed.  | Active aftertreatment diesel particulate filter regeneration will be disabled.   |
| 2754<br>81<br>16                     | Engine Diesel Particulate Filter Intake Pressure - Data Valid But Above Normal Operating Range - Moderately Severe Level. Excessive black smoke has been detected exiting the engine and entering the aftertreatment diesel particulate filter. | None on performance  |
| 2764<br>1209<br>16                   | Exhaust Gas Pressure - Data Valid but Above Normal Operating Range - Moderately Severe Level. High exhaust gas pressure has been detected by the exhaust gas pressure sensor.   | Fueling derate to bring exhaust gas pressure below the maximum operating limits.   |

<sup>\*</sup> Some fault codes are not applied to this machine.

| Fault code<br>J1939 SPN<br>J1939 FMI | Reason  | Effect (only when fault code is active)   |
|--------------------------------------|---|---|
| 2765<br>2797<br>13                   | Engine Injector Bank 1 Barcodes - Out of Calibration. Invalid injector barcode information has been entered, or has not been entered at all.  | None on performance.  |
| 2777<br>3703<br>31                   | Particulate Trap Active Regeneration Inhibited Due to Inhibit Switch - Condition Exists. Regeneration of the diesel particulate filter has been prevented due to the permit switch being disabled.  | None on performance.  |
| 2878<br>4097<br>7                    | Aftertreatment Fuel Drain Valve - Mechanical System Not Responding Properly or Out of Adjustment. The aftertreatment fuel shutoff drain valve has been detected to be stuck closed.   | Active aftertreatment diesel particulate filter regeneration will be disabled.        |
| 2961<br>412<br>15                    | Exhaust Gas Recirculation Temperature - Data Valid But Above Normal Operational Range - Least Severe Level. EGR temperature has exceeded the engine protection limit.   | Slight fueling derate to bring EGR temperature under the maximum limit.               |
| 2962<br>412<br>16                    | Exhaust Gas Recirculation Temperature - Data Valid But Above Normal Operational Range - Moderately Severe Level. EGR temperature has exceeded the engine protection limit.  | Severe fueling derate to bring EGR temperature under the maximum limit.               |
| 2973<br>102<br>2                     | Intake manifold 1 pressure - Data erratic, intermittent, or incorrect. The intake manifold pressure sensor is reading an erratic value.   | The ECM will estimate the intake manifold pressure. Possible engine power derate.     |
| 3133<br>3610<br>3                    | Aftertreatment Diesel Particulate Filter Outlet Pressure Sensor Circuit - Voltage Above Normal, or Shorted to High Source. High signal voltage detected at the aftertreatment diesel particulate filter outlet pressure sensor circuit.           | Active and stationary regeneration of the diesel particulate filter will be disabled. |
| 3134<br>3610<br>4                    | Aftertreatment Diesel Particulate Filter Outlet Pressure Sensor Circuit - Voltage Below Normal, or Shorted to Low Source. Low signal voltage detected at the aftertreatment diesel particulate filter outlet pressure sensor circuit.             | Active and stationary regeneration of the diesel particulate filter will be disabled. |
| 3135<br>3610<br>2                    | Aftertreatment Diesel Particulate Filter Outlet Pressure - Data Erratic, Intermittent or Incorrect. The aftertreatment diesel particulate filter outlet pressure sensor is reading an erratic value at initial key ON or during engine operation. | Active and stationary regeneration of the diesel particulate filter will be disabled. |
| 3139<br>3667<br>3                    | Engine Air Shutoff Circuit - Voltage Above Normal or Shorted to High Source. High signal voltage detected at the air shutoff circuit.   | The engine air shutoff valve will be disabled.  |
| 3186<br>1623<br>9                    | Tachograph Output Shaft Speed - Abnormal Update Rate. No communication or an invalid data transfer rate has been detected on the J1939 data link between the ECM and the tachograph output shaft speed sensor.                                    | None on performance.  |

 $<sup>\</sup>ensuremath{\,\mathbb{X}\,}$  Some fault codes are not applied to this machine.
